

SLICING MACHINE TRANSFER BELTS

PRODUCT INFO SHEET

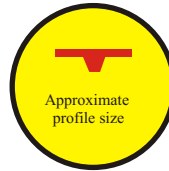

Rydell Industrial (Belting) Co supply all the transfer belting used on slicing machines used in the production and processing of Smallgoods, Cheese and various food items.

These are commonly used on the outfeed section of these machines to transport the product to the packaging stations in the conversion process.

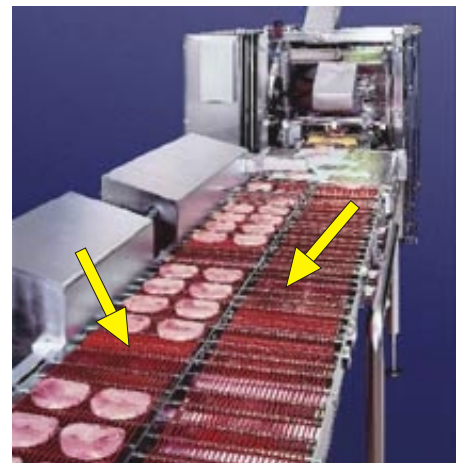

These belts are supplied in rolls for heat welding on the machine or they can be fabricated to your specific requirements.

Whilst the majority of these belts are flat on the top with a longitudinal profile underside, they can also be other shapes such as round cord etc. Our belts are made using high quality polyurethane for excellent elasticity and resistance to oils and fats.

We also sell all the necessary joining equipment for you to install the belts quickly and easily on your machine for reduced downtime.

Ask your nearest Rydell branch for a competitive quote on these products.
