Rycon ZipLink Belts

Rydell Industrial (Belting) Co is pleased to announce its newest belt material, ZipLink.

ZipLink is a breakthrough in belting design that combines time tested rubber cover materials with a structured spiral link mesh that can be easily spliced at any length into a continuous belt without the need for special tools, presses or other equipment.

The ZipLink construction eliminates points of weakness because there is no loss of strength in the splice area, making the belts stronger so they last longer than belts of other seamed or fused materials.

ZipLink is based on a low stretch polyester monofilament carcass which offers very high lateral stability for ease of tracking. ZipLink was developed because many of our customers were looking for a belt substrate that provided long life and flexibility for multiple applications and they could change easily and quickly without downtime or expensive overtime. It is common for ZipLink users to reduce the time and personnel required to change belts by more than half after converting to ZipLink.

You've never seen a belt so versatile or revolutionary as ZipLink. Ask for a demonstration from your nearest Rydell Industrial (Belting) Co office today.
